Cleaning

Regular cleaning with a good vacuum cleaner will remove any surface dust and prevent undue build up of material that could harm the carpet.

Prompt expert spot cleaning should be carried out as required. Shampooing should be conducted in accordance with the manufacturer's instructions.

Tolerances and Quality

Product specifications are based on the results of independent testing.

These specifications may be subject to slight variations. Any variation to specifications should be minimal due to strict quality control at all stages of manufacture.

The width of the carpet is controlled to $\pm 1.5\%$.

Colour variation does occur between dye batches.

Installation

As per AS2455-1-1995 and Manufacturer's instructions supplied with carpet.

Lines in the pattern will not run exactly parallel to walls or adjacent hard floor surfaces. This is due to stretching of the carpet during installation. Lines should not waver more than 20mm from the parallel position.

Electrostatic Properties

No discomfort from static discharge should be expected under normal atmospheric conditions of approximately 45% Relative Humidity and 20° C.

Problems with static discharge are generally associated with conditions of low humidity.
